

Visit our apprenticeships page for more information

September starts

We are delighted to welcome our new day-release apprentices to our facility at SIGTA in Portslade and at Faraday House in Eastbourne.

As part of their apprenticeship, they are working towards an Advanced Manufacturing Engineering Level 3 Diploma.

They are gaining the skills required to become a computer aided design technician or electronic, electrical or an engineering technician over the next two years.

Apprenticeships - it's careers event season

In the last few days we have set up stand for careers events at St Leonards Academy, Downlands Community School in Hassocks, Seahaven Academy in Newhaven & Chailey School. All really busy events with plenty of interest from students and their parents/carers.

I am meeting more and more young people who are interested in apprenticeship programmes. Reasons vary but many visitors to my stand are concerned about the huge student debt that comes with a university education – now averaging almost £50,000.

With so many amazing, well paid apprenticeships available from our SIGTA member companies, who can blame them!

Circle back to our vacancies page regularly as we have new apprenticeships throughout the year

Planning a careers event?

Get in touch and we will do our best to attend. We are a small team and get to as many events as we can but sometimes there are clashes with so many schools throughout Sussex

Visit the schools page of our website by clicking [here](#).

What will I earn?

Salaries vary from role to role but wages are averaging around £310 a week. We have some apprentices starting on over £400 a week!

Will I go to college?

All of our technical courses include college day-release which could be with a local college or with us here at SIGTA in our centres in Portslade or Eastbourne.
